Summary

Software Engineer / Infrastructure Architect specialized in AIOps, secure data pipelines, and network isolation models. Proven track record in architecting high-performance, zero-trust backend systems and managing complex hypervisor environments for end-node deployment. Skilled at engineering introspective solutions that preserve data sovereignty and comply with strict data protection frameworks (HIPAA/PHI/CIA).

Professional Experience

Cybersecurity Architect & AI Engineer | Aeonic AI

August 2025 -June 2026

- Secure Web Dashboard & AI Ingestion Pipeline: Designed and built a hardened, local web application dashboard and ingestion pipeline leveraging Cursor and n8n agent automation for web-development and pre-deployment full security audits.
- Tiered Network Segmentation & PHI Vaulting: Architected modular VLANs environment across multi-layered networks. Isolated an internet-facing DMZ from an air-gapped, LUKS-encrypted PostgreSQL databases to strictly safeguard confidential patient health information (PHI) under a zero-trust model.
- Configured layered interface rules for strict end-node communication and virtual bridges inside Proxmox hardware to handle low-latency, 10GbE linear data flows between Mac OS and local LLM inference engines (NVIDIA Blackwell/RTX Pro 6000).

Software Developer | Freelance

January 2022 – March 2024

- Full-stack Web & Database Applications: Designed and engineered custom web applications backed by relational databases (SQL Server, PostgreSQL) using C# and the .NET ecosystem.
- System Hardening & Cryptography: Automated secure identity and credential management workflows for local environments using GnuPG/Kleopatra and customized shell scripts.
- SDLC Governance: Managed software development lifecycles from technical requirement gathering through multi-tier testing, code reviews, and system debugging.

Projects & Education

Cyber Defense XR Training Environment | Capstone Project

- Built an Extended Reality (XR) training pipeline aligning digital twin fidelity with real-time AI guidance frameworks, analyzing end-to-end dataflows and system constraints.

B.A.S Applied Computing | The University of Arizona

Tucson, AZ

- Emphasis on Cloud Computing
- Minor in Cyber Defense

2021 - 2025

Stack: Python, C#, .NET, Node.js, C++, PostgreSQL, Bash Scripting.

Platforms & Systems: Proxmox VE, Linux (Ubuntu/Debian), OPNsense, n8n. Docker, Tailscale, self-hosted IdPs.
